

Summer Activity Guide 2017

With last summer being such a great success, I could not wait to get started on this years activities for STEM Camp! I absolutely love researching and developing great activities to adapt to our STEM Camp themes. With your support I am able to pursue my passion of creating fun and engaging programming in the STEM fields for your children!

This year will bring more fun experiments, engineering and technology challenges, while even having some fun with math!

Special guests will be invited to most of our locations each week to engage our campers in hands on activities that complement their areas of expertise and our themes.

I can't wait for July!

- Leanne Ford, Program Director

Activity Spotlight

Transformers Week for Seniors will have our campers building both battery operated and solar powered Bots!

Pokemon Week for Juniors will have our campers building the challenging whirling and twirling Pokemon, "Tornadus".

Activity Spotlight

During Star Wars week our young Jedi campers will compete using Centripetal Forces and test their rocketry skills!

Boomerang building & making zombie slime and ooze will give campers the STEM skills they need to catch zombies and get messy at the same time!

SPECIAL STEM GUESTS

This year, we will have several special guests at several camp locations. We are currently working to get these commitments from our guests to visit as many of our STEM Camp locations as possible. This year I am working with Ray's Reptiles and their very own Teenage Mutant Ninja Turtles along with Club Rex as we all know turtles have been around since the dinosaurs! We are negotiating with a special guest to help campers learn about the special powers plants have in our Plants vs. Zombies week. Lastly, we are planning on a special guest to guide campers with rockets during Star Wars week.

Please check our website: www.stemcamp.ca for confirmation of guests at your camp location.
